Cancel all claims without prejudice.

Add new claims as attached.

Please provide the following new abstract of the disclosure:

A three-phase generator, comprising a winding packet that is penetratable by a rotating magnetic field, a number of winding of the winding packet being respectively connected together into at least one phase at which a generator voltage is tappable, the winding being comprised of a number of parallel wound winding wires, out of at least three parallel wound winding wires (33, 34) of a phase (U, V, W, U', V', W'), at least two being connected to separate phase terminals (34, 36, 38, 34', 36', 38') at each of which a partial generator voltage (u, v, w, u', v', w') is tappable, the windings 28 constituting a main winding and the windings (44) constituting an auxiliary winding, both windings (28, 24) of a phase being connected electrically

parallel to one another, all the windings being located in a star-shaped configuration and being connected with one another in center point.
